

**Pascoe Industries Pty Ltd**  
**Polyurethane Specialist System Suppliers**  
Proudly Australian Owned & Operated since 1988.

## **POLYURETHANE FOAM SYSTEMS**

At Pascoe Industries we have supplied and manufactured Polyurethane Foam products for over 25 years. We specialise in cavity filling and insulation applications as well as general moulded parts.

Rigid polyurethane foam can have excellent thermal insulation properties. Rigid foams are a two-component system that is used to produce general purpose foams.

The rigid foam range in free-rise density from 9kg/m<sup>3</sup> to 400kg/m<sup>3</sup> to suit a number of applications.

This is a very versatile foam range used for insulation, buoyancy, structural support or void fill.

Flexible polyurethane foam can be extremely comfortable. This explains their extensive use in automotive and furniture industries. Flexible foam is a two-component system.

The main applications are for appliance insulation, for water heaters, cold display cabinets, refrigerators, etc.

Flexible foam has good cell structure, good flow for easy processing, good compressive strength and high sound insulating properties.

**If you are interested in any of our polyurethane products or want more information please feel free to contact us.**
